

Because one pair of hands is often not enough

The HUWA-SAN[®] FOGGER
disinfects everywhere - quickly and effectively.

NEW

Huwa-San[®]

A sustainable way of disinfection

What is Huwa-San[®]?

Huwa-San is a disinfectant based on silver stabilized **hydrogen peroxide** (H_2O_2). This is a colourless, odourless liquid. After it reacts, there is only water (H_2O) and oxygen (O_2) left, so no traces remain.

Huwa-San is a recognized biocide, proven to be effective against viruses, bacteria, spores and fungi, among others. This is the perfect solution in the fight against coronavirus.

Roam Technology distributes high-quality disinfectants based on this **clinically proven technology** to, among others, the healthcare, food and travel sectors.

**Intensive sanitizing,
without the
labour-intensive work!**

Why the Huwa-San[®] Fogger?

The portable Huwa-San Fogger takes Huwa-San's technology to the next level. This is because the new nebulizer allows you to thoroughly disinfect an entire room extremely effectively from top to bottom, without anyone being present.

The Huwa-San Fogger is **a huge leap forward in terms of saving time and improving quality!**

You simply start the device, and the Huwa-San disinfectant is atomized throughout the room at record speed.

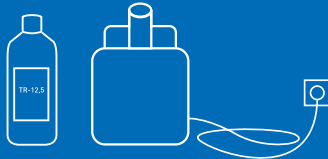

Huwa-San[®]
FOGGER

**Stop the spread
of infections**

This is how easy it is to use the **Huwa-San[®] Fogger**

1

Take the portable Huwa-San Fogger to the room to be disinfected, together with a bottle of Huwa-San TR-12.5 disinfectant. Plug the Fogger's cable into an electrical socket.

2

Unscrew the cap on the bottle, attach the bottle to the nozzle, and snap the nozzle onto the Huwa-San Fogger.

3

Enter the room's volume on the display so that the device knows how much product to dispense. Turn on the Huwa-San Fogger and leave the room, making sure that the room is completely sealed.

4

After the atomizing has finished, leave the hydrogen peroxide to do its work. You can then re-enter the room and welcome your patients, passengers, guests or sports club members in a completely safe environment.

Use biocides safely. Read the label and product information before use.

Key Benefits

Clinically
proven efficacy

Time-saving
(not labour-intensive)

Antiviral and
antibacterial

Effective
against coronavirus

Odourless and
colourless, no residues

Non-corrosive
